DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the structure of the transfer function in claims 2 and 3 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

2. Claims 3 and 6 are objected to because of the following informalities: these claims are required a period (.) at the end of claims. Appropriate correction is required.

Claim Rejections - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

4. Claims 1-6 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claims 1-3 clearly recite a filter implementing a transfer function according to a mathematic algorithm. Claims 4-6 recite a method to carry-out the above filter. In order for such a claimed method, computer-related process, or a claimed non-specified apparatus implementing the underlined process to be statutory, the claims must include either a step or means that results in a physical transformation outside the computer or a limitation to a practical application. However, it is clear from the claims' body that the claims merely recite step or non-specific means for data computation and manipulation in performing a mathematical transfer function. The input is a set of number and output is also a set of number. The claims fail to recite any step or means that results in a physical transformation outside the computer, that includes a limitation to a practical application, or that requires a specific computer to implement the claimed process. Therefore, claims 1-6 are clearly directed to a non-statutory subject matter.

Application/Control Number: 10/041,044

Art Unit: 2124

Claim Rejections - 35 USC § 102

Page 4

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 6. Claims 1 and 4 are rejected under 35 U.S.C. 102(e) as being anticipated by Tan et al. (U.S. 6,233,594).

Re claim 1, Tan et al. disclose in Figure 4 a multichannel digital filter bank (110) implemented by cascading sub-filters (e.g. 122) of the recursive type (feedback as seen in 122 with delay z⁻¹) suitable for graphically equalizing electrical signals received via a communication path having minimal distortion of signal spectral characteristics including magnitude and phase (col. 2 lines 1-15) nor does this method introduce additional delay to the signal comprising: a plurality of first order (e.g. 122, 124 in Figure 4) or second order digital filters, connected in a cascade fashion (e.g. 122 and 124 one after another).

Re claim 4, it is a method of claim 1. Thus, claim 4 is also rejected under the same rationale as cited in the rejection of rejected claim 1.

7. Claims 2 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Dyer (U.S. 4,947,360).

Application/Control Number: 10/041,044

Page 5

Art Unit: 2124

Re claim 2, Dyer discloses in Figures 1-2 a multichannel digital filter bank implemented by cascading sub-filters (e.g. 1 and 3) of the recursive type suitable (e.g. in 1 with feedback signal) for graphically equalizing electrical signals received via a communication path having minimal distortion of signal spectral characteristics including magnitude and phase (col. 1 lines 35-50) nor does this method introduce additional delay to the signal comprising: a plurality of first order (e.g. 1 and 3) or second order digital filters, connected in a cascade fashion (e.g. filter 1 is after filter 3) wherein the transfer function is $H(z) = \{1-az^{-1}\}/\{1-bz^{-1}\}$ (e.g. B(z) equation in col. 2 line 29 wherein $b = K_3$ and $a = -(K_2K_4-K_3)$); wherein |a| and |b| are less than 1 (e.g. all values of coefficients are cited in Table 1 in col. 4 less than 1) and same sign.

Re claim 5, it is a method of claim 2. Thus, claim 5 is also rejected under the same rationale as cited in the rejection of rejected claim 2.

8. Claims 3 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Cox et al. (U.S. 5,353,346).

Re claim 3, Cox et al. disclose in Figure 2 a multichannel digital filter bank implemented by cascading sub-filters (e.g. 14H and 24H) of the recursive type suitable for graphically equalizing electrical signals received via a communication path having minimal distortion of signal spectral characteristics including magnitude and phase nor does this method introduce additional delay to the signal comprising: a plurality of first order or second order digital filters (e.g. equation 50 in col. 3), connected in a cascade fashion (e.g. 14H and 24H) wherein the transfer function is $H(z) = \{1-2g\cos(p)z^{-1}\}$

Art Unit: 2124

 $^{1}+g^{2}z^{2}$ }/{1-2rcos(p) $z^{-1}+r^{2}z^{2}$ } (e.g. H(z) in col. 3 line 50 wherein g = 1; r = beta; p = 2pif estT as seen in col. 6 line 10).

Re claim 6, it is a method of claim 3. Thus, claim 6 is also rejected under the same rationale as cited in the rejection of rejected claim 3.

Conclusion

- 9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
 - a. U.S. Patent No. 6,112,218 to Gandhi et al. disclose a digital filter with efficient quantization circuitry.
 - b. U.S. Patent No. 5,689,449 to Saramaki et al. disclose a decimation filter.
 - c. U.S. Patent No. 4,748,578 to Lagadec et al. disclose a process and apparatus for translating the sampling rate of a sampling sequence.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chat C. Do whose telephone number is (703) 305-5655. The examiner can normally be reached on $M \Rightarrow F$ from 7:00 AM to 4:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chaki Kakali can be reached on (703) 305-9662. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Application/Control Number: 10/041,044

Art Unit: 2124
